

Invisi-Rail Adaptor for the RailGuard 200

Invisi-Rail is a **bolt-on adaptor** for the **Garlock RailGuard 200**. Completely free standing, easy to set up and **OSHA-compliant**, the Invisi-Rail is the best all-around solution for protecting personnel while maintaining the clean look of the building exterior.

With Invisi-Rail, install RailGuard 200 protective railings around objects or a roof perimeter to eliminate fall hazards, and then fold the railings down against the roof when not in use, hiding them from view at ground level.

Convert any RailGuard 200 portable railing system into an Invisi-Rail railing system.

Simply bolt the Invisi-Rail adaptor to the roof deck, insert the RailGuard 200 railing, and pin it in place.

Now you can fold your railing **down to 8 in. above the roof**, and no one from the ground level will ever see the OSHA-compliant protection when not in use.
